<p>Brian,</p> <p>Excellent work! There are only two small issues with the submission. Firstly, you are missing alt text on a couple images. Secondly, your repo name is not particularly descriptive. Try to name your repo after the application itself rather than the assignment name. Otherwise keep up the excellent work.</p> <p>-JNE</p>			Grader Coding, Jun 8, 2022 at 8:11pm

King, Brian, Jun 23,
2022 at 1:39pm

Hello Brian,

Congratulations on an excellent password-generator challenge submission! Great job deploying your application to a live URL!
Your submission meets all of the challenge requirements. Also, great usage of "if" statements and a "for" loop. Nice work!

Also, Brian, thank you for submitting a link to your GitHub repo. The repo has a unique name and follows best practices for naming and file structure and contains a quality README file with a description of your project, a screenshot and a link to the deployed site. Great job!

Grader Coding, Jun
23, 2022 at 3:44pm

Brian, it is great to see you use the skills that you have learned so far! Keep up the great work!

<p>Brian,</p> <p>Congratulations on a good homework assignment! You were able to demonstrate your ability to build a dynamic web application that was powered by your Javascript code!</p> <p>On the same note, great job implementing a polished user interface that was also responsive!</p> <p>Great job deploying your application, you were able to correctly deploy to a live URL. Your application loads with no errors upon page load.</p> <p>However, the application did lose some points because of the following:</p> <ul style="list-style-type: none">- The submission had a link to your GitHub but not the corresponding GitHub repo. The correct link would be https://github.com/bnk5532/API-code-quiz- The timer doesn't stop when all questions have been answered, it was going into negative numbers. I had gotten a score of -21- Code lacks quality comments <p>Overall, I have to say how nice it was to see you build upon the skills you acquired thus far to create something so unique! I really liked the color changes when I got an answer wrong or right!</p> <p>Keep up the hard work!</p> <p>Central Grader - MWA</p>

<p>URL: https://bnk5532.github.io/myScheduler-pro/</p> <p>GitHub URL: https://github.com/bnk5532/myScheduler-pro</p> <p>Hi Brian,</p> <p>Excellent job on the Day Planner assignment! Your submission meets all of the assignments technical criteria. Upon launching your application the browser loads smoothly and without error. The user is then presented with textarea time blocks ranging from 7am-8pm that allows them to add notes about their day. Good job implementing momentJS and jQuery to dynamically update the DOM to display the current date and color changing textarea. This makes for a pleasant user experience. All of the user's notes are stored in localStorage so when the user revisits the application all notes are preserved for them to reference. Your GitHub repository follows best practices for file structure and contains a unique repo name avoiding words like 'homework' and 'assignment'. In addition to your repos file structure, your codebase is clean and properly laid out, follows best practices for indentation, commentary and naming conventions. Well done creating a quality README file that includes a brief description, a screenshot of the completed UI offering a preview of your applications functionality and a link to the deployed site. Overall great job.</p> <p>Keep up the hard work!</p> <p>- CG Sam</p>			<p>King, Brian, Jul 7, 2022 at 9:52pm</p> <p>Grader Coding, Jul 8, 2022 at 11:31am</p>

6:12pm

GitHub: <https://github.com/bnk5532/weather-aboveGround-app>

Hello Brian,

Great work on your application. You were able to build and deploy a dynamic weather dashboard. The application allows the user to search for the current weather and weather forecast of any city. The application dynamically renders all the required data. It also keeps the searched cities persistent in local storage and in a search history.

Grader Coding,
Jul 14, 2022 at
7:37pm

Your repo looks great. You have a complete quality README that shows your work! Your code follows proper coding practices with good comments and proper indentation.

Keep up the great work!

Hey Brian, excellent job on this one! Multiple things you did extremely here are: Your file structure/codebase is formatted very nicely. Your commit history is robust with good/descriptive commit messages. Your walkthrough video is thorough showcasing everything we are expecting to see.			Grader Coding, Aug 6, 2022 at 9:38pm	
The only thing you missed the mark on is adding the ability to enter the users github & email to the questions section.				
Overall - great job!				
-CP			Grader Coding, Aug 8, 2022 at 10:43pm	
Hello Brian, thank you for your submission as well as a very detailed and concise walkthrough demonstration video! As for updating the walkthrough video, it's more for you at this point as it meets all of the requirements. Prospective employers who might watch it are who I would update it for.				
I cloned down the repository and tested locally, and everything functioned flawlessly, except for one requirement that was missed. The link to the user's email is not a requirement but it is nice to have! The requirement is to have a link to the GitHub user's profile. (I apologize if

at 10:25pm

Hi Brian - excellent job on this assignment! Upon cloning your repo and running it locally, your page loaded without any problems. I was able to create new notes, and each time I did so, the additions were reflected in the 'db.json' file of my VSC window. Each note in the db.json file has a unique ID. You also made a nice readme which describes your application with screenshots, and you remembered to include a link to your deployed application in your readme. And, you're earning bonus points to having full 'delete' functionality! - Priya M.

Hi Brian,			
Thank you for your homework submission! You were able to demonstrate your ability to build a structured command line interface aligned with the content management system criteria! On the same note, good job connecting your DB, building out your schema and DB infrastructure! You were able to configure your entire back-end for your database management system! Most of the functionality in your CLI works perfectly with your inquiries (the only one that did not function properly is the updated employee). You were also able to incorporate the inquirer module and persist the data received in a relational database. Good job implementing the delete query for employees as a bonus feature!			Grader Coding, Aug 29, 2022 at 2:58pm
As far as your repository, it has a unique name. It follows best practices for file structure and naming conventions as well as proper coding conventions. It has a nice README that includes a description and link to walkthrough video as required. Good job with your walkthrough video! You were able to create a clean, comprehensive, and easy-to-follow video navigating through the application's functionality.			
Overall, you did a good job! Keep up the hard work!

<p>Hi Brian!</p> <p>I had a chance to review your React portfolio and you did a great job on this one! Your page loads with no issues and you are using React correctly to render components on the page multiple times. You have an About page with a bio, a projects page and a contact page with form validation. You also have the Resume page with a list of skills and a download link. Finally, you have a repository with several detailed commit messages as well as a Readme with a deployed link and a screenshot of the application. Nice work!</p> <p>The only thing I noticed while looking at your site is in regards to the responsiveness. It seems that elements do seem to get squished at smaller screen sizes and the navigation panel seems to center itself on wider ones. Setting min/max widths for things can help with this a lot and this is especially important for large images which have a tendency to spill off the page on smaller screens.</p> <p>Well done! Keep up the great work!</p> <p>-Central Grader S.M.</p>
